

Huijue core switch disables DHCP

Article Overview

To disable DHCP on a Huijue core switch, you need to remove or deactivate any DHCP pools and ensure VLAN interfaces are not configured to provide IP addresses.

Steps to Disable DHCP

- Access the Switch CLI
- Connect via console, SSH, or Telnet.
- Enter system view mode:
system-view

- Check Existing DHCP Configuration
- Display all DHCP pools:

display dhcp server ip-in-usedisplay dhcp server pool

- This helps identify which pools are active and which VLAN interfaces are associated with DHCP.

- Remove DHCP Pools
- Enter the DHCP view and delete the pools:
dhcp serverundo pool

- Repeat for all configured pools to stop the switch from assigning IP addresses.

- Disable DHCP on VLAN Interfaces

- Enter the interface view for each VLAN interface:
interface Vlanif undo dhcp select global

- This ensures the interface no longer provides DHCP services to connected clients....
