

Installation Specifications and Dimensions of Cable Tray Brackets

Article Overview

Cable tray brackets should be installed according to tray type, load, and span, typically with support spacing ranging from 1.5 to 3 meters, following NEMA and NEC guidelines.

Support Spacing and Bracket Placement

The spacing of cable tray supports depends on the tray type, material, and load:

- Ladder trays: Designed for heavy cable loads and long spans, supports are generally spaced every 1.5 to 3 meters (5 to 10 feet) to prevent deflection and maintain structural integrity .
- Perforated or solid-bottom trays: These trays carry lighter loads and may require closer support spacing, typically 1.2 to 2 meters (4 to 6.5 feet) .
- Wire mesh trays: Often used for instrumentation or light cables, support spacing can be shorter, around 1 to 1.5 meters (3 to 5 feet) .

Bracket Types and Installation Considerations

Common bracket types include:

- Trapeze supports: Horizontal bars suspended from the ceiling, ideal for multiple trays; spacing follows the tray's load rating .
- Hanger rod clamps: Vertical rods with clamps to hold trays; spacing is determined...
