

Installation of Integrated Power Cabinet

Article Overview

Integrated power cabinets should be installed on a suitable foundation, connected to incoming and outgoing loads, and commissioned following manufacturer safety and configuration guidelines.

Site Preparation

Before installation, ensure the site meets environmental and structural requirements:

- **Foundation:** Use a concrete pad, piers, or other stable base capable of supporting the cabinet's weight and vibration loads .
- **Clearance:** Maintain sufficient space around the cabinet for ventilation, maintenance, and safety access .
- **Environmental Conditions:** Check temperature, humidity, and altitude limits specified by the manufacturer. For high-altitude installations, consult the manufacturer for adjustments .

Unpacking and Inspection

- Inspect the cabinet for shipping damage and verify all components against the Bill of Lading .
- Remove protective packaging carefully and ensure no internal components were displaced during transit.
- Report any damage immediately to the supplier before proceeding with installation
