

Integrated Power Supply Installation Process

Article Overview

The installation of an Integrated Power Supply (IPS) involves careful site preparation, module assembly, electrical connections, safety checks, and commissioning to ensure reliable AC and DC power for signalling systems.

1. Pre-Installation Preparation

- **Site Selection:** Install the IPS in a dust-free, well-ventilated area with stable flooring. Ensure the location meets the pre-commissioning checklist requirements for space, ventilation, and accessibility .
- **Inspection of Shipment:** Check the packaging for transit damage. Inspect the front panel and internal components for loose or broken connections. Report any damage immediately .
- **Safety Precautions:** Only qualified electrical technicians should perform installation. Remove metal objects (rings, watches) and ensure the AC supply is switched off. Use insulated tools and verify absence of voltage with a suitable voltmeter .

2. Module and Panel Installation

- **Panel Placement:** Mount the IPS panels on a bottom channel with anti-vibration pads. Ensure proper alignment and secure fastening .
- **Module Assembly:** The SMPS-based IPS typically includes FRBC (Float Rectifier cum Boost Charger) modules, Distribution Supervisory Control & Alarm (DSA) units, inverters, AVR, transformers, and metering sections . Install each module according...
