

Internet Data Center Norway

Article Overview

Norway hosts a rapidly growing, sustainable, and technologically advanced data center market, with over 70 facilities operated by leading providers and a strong focus on renewable energy and AI-ready infrastructure.

Overview of Norway's Data Center Market

Norway has a sophisticated data center ecosystem with approximately 36 existing facilities and 34 upcoming projects, totaling over 70 data centers across 18 key regions, including Oslo, Tørdal, and Telemark . The market is dominated by Tier 3 and Tier 4 facilities, which are expected to hold the majority of market share by 2029, reflecting a strong emphasis on resilience, security, and high availability . Leading operators include Green Mountain, Bitzero, Polar DC, and NSCALE, with Oslo accounting for over 50% of the country's IT capacity .

Technological Capabilities

Norwegian data centers are increasingly AI-ready and high-performance computing capable. For example, Polar DC's Herøya facility (HER01) is designed for AI workloads, featuring high-density racks, advanced liquid cooling, and a PUE of 1.12, powered entirely by renewable hydroelectric energy . The deployment of 5G technology is also driving demand for edge data centers, enabling low-latency services and supporting the growth of digital services across the country .
