

Irish FRP Corrosion-Resistant Cable Trays

Article Overview

FRP cable trays offer lightweight, corrosion-resistant, and durable solutions for industrial and coastal applications, outperforming traditional metal trays in harsh environments.

Overview

FRP (Fiber Reinforced Plastic) cable trays are engineered from high-strength fiberglass combined with thermosetting resins such as fire-retardant polyester or vinyl ester, creating a lightweight yet highly durable material that resists rust, oxidation, and chemical corrosion . In Ireland, these trays are ideal for industrial, marine, and coastal environments, where exposure to moisture, salt-laden air, and chemicals can rapidly degrade traditional metal trays .

Types of FRP Cable Trays

- **Ladder Type:** Features two longitudinal side rails connected by rungs, providing ventilation and heat dissipation for multiple cables. Commonly used in chemical plants, offshore platforms, and manufacturing facilities .
- **Perforated/Channel Type:** Includes a perforated bottom with integral side rails, often used where fire-proof, moisture-proof, and dust-proof protection is required. Covers can be added for extra protection against snow, debris, or mechanical damage .

Key Features

- **Corrosion Resistance:** FRP trays are inherently immune to chemical attacks, saltw...
