

Is Huijue optical cable flame retardant

Overview

With LSZH (Low Smoke Zero Halogen) jackets producing low smoke and zero halogen during combustion, they meet indoor fire safety regulations. The products support G652D/G657A single-mo. Note: Specifications are subject to change without prior notice for product improvement. Indoor Fiber Optic Cables (GJBFJH/GJBFJV) are specifically designed for building interior fiber optic communication. Its structure is mainly composed of cable core, longitudinal covering a layer of two-sided synthetic mica tape outside cable core, inner sheath packed with ceramic sheathing. Fire-resistant cables are cables that continue to operate in a specified condition when burned under a specified source of ignition and time. What is Flame Retardant Cable Flame retardant cables are cables that, after being burned, withdraw the source of ignition and the flame extinguishes itself. The core design of flame-retardant cables focuses on preventing flame propagation along the cable, thereby reducing the risk of fire spread and secondary damage. Flame-retardant means the material will not accelerate burning and tends to self-extinguish once the flame source is removed.
