

Is PC material good for waterproof electrical distribution boxes

Article Overview

Polycarbonate (PC) is an excellent material for waterproof electrical distribution boxes due to its high impact resistance, weather durability, and suitability for outdoor and industrial environments.

Material Properties and Advantages

Polycarbonate (PC) is a thermoplastic polymer known for its exceptional mechanical strength and impact resistance, making it highly durable against accidental drops or external forces . It also exhibits excellent weather and UV resistance, which allows PC enclosures to withstand prolonged exposure to sunlight and harsh outdoor conditions without degrading . PC is also electrically insulating, lightweight, and dimensionally stable, which is critical for maintaining the integrity of electrical connections in distribution boxes .

Suitability for Waterproof Applications

PC enclosures are widely used in IP65, IP66, and IP68 rated boxes, providing reliable protection against dust, water jets, and short-term immersion . The material's toughness ensures that the box maintains a tight seal between the housing and cover, which is essential for meeting waterproof standards. PC is particularly advantageous in outdoor, industrial, and moisture-prone environments, including photovoltaic systems, commercial installations, and wiring systems exposed to rain or humidity
