

KVM switch cannot synchronize

Overview

Solution: First, check if the switch's power indicator light is on and ensure the power source is properly connected. If there's a power switch, make sure it's in the "On" position. No matter how we use it, it does support a number of servers to connect to the same set of consoles, saving us desk space and a good number of hardware costs. When connecting to a server via a Digital IP KVM, you may notice that the local mouse (your desktop) is not synchronizing with the remote mouse (the workstation/server that you. Mouse synchronization problems and related issues can be attributed to a variety causes (server resolutions set too low, individual server mouse settings, etc.) - most of which are easily fixed. You'll also learn when it might be time to upgrade to a more reliable, feature-packed KVM switch like Avico's.
