

Kenya Railway Bridge

Article Overview

Kenya Railways operates numerous bridges, including the Mbaraki Rail Over Road Bridge in Mombasa and 98 bridges along the Mombasa-Nairobi Standard Gauge Railway, ensuring safe and efficient rail transport.

Key Bridges and Infrastructure

Mbaraki Rail Over Road Bridge Located along Moi Avenue in Mombasa, the Mbaraki Rail Over Road Bridge is a critical structure for both rail and road traffic. Kenya Railways has conducted emergency repair works on this bridge to maintain its structural integrity and ensure safety for commuters and freight operations. Temporary closures of Moi Avenue have been implemented during maintenance, with alternative routes provided for motorists to minimize disruption . Mombasa-Nairobi Standard Gauge Railway (SGR) Bridges The Mombasa-Nairobi SGR, a flagship infrastructure project, includes 98 bridges and viaducts designed to navigate challenging terrain, including the Great Rift Valley. These bridges are engineered to support heavy freight and passenger traffic, forming a backbone for Kenya's modern rail network. The SGR bridges are part of a Class 1 standard-gauge railway system, designed for mixed traffic and future electrification, enhancing both capacity and sustainability . Mombasa SGR Terminus and CBD Rail Link The 26-kilometer CBD rail link in Mombasa includes rehabilitated sections and new bridges connecting the SGR terminus at Miritini to the Central Business District. This link improves last-mile connectivity for passengers and integrates with local commuter services, demonstrating the role of bridges in urban rail infrastructure .
