

Madagascar Household Electrical Distribution Box

Article Overview

Household electrical distribution boxes in Madagascar are designed according to local technical standards and are available from suppliers like Madecasse and Legrand, supporting both single-phase and three-phase residential connections.

Overview

In Madagascar, household electrical distribution boxes, also known as coffrets électriques, are essential for safely distributing electricity from the main supply to various circuits within a home. They typically include circuit breakers, switches, and protective devices to manage and safeguard electrical installations. These boxes are designed to comply with local standards for low-voltage (BT) and medium-voltage (MT) networks, ensuring safe operation in residential settings.

Types and Features

- Single-phase and three-phase boxes: Depending on the household load, distribution boxes can handle either single-phase or three-phase connections.
- Materials: Conductors are usually aluminum with polyethylene insulation, rated for 0.6/1 kV networks.
- Circuit protection: Boxes include disjoncteurs (circuit breakers) and switches to protect against overloads and short circuits.
- Standardized sizes: Phase conductors range from 25 mm² to 150 mm², and neutral conductors from 54.6 mm² to 95 mm²
