

Mali Three-Year Warranty AI Server OSFP

Article Overview

OSFP 800G transceivers provide high-bandwidth, thermally optimized connectivity for AI servers, supporting future-proof deployments with robust three-year operational reliability.

Overview of OSFP for AI Servers

OSFP (Octal Small Form-factor Pluggable) is a pluggable optical transceiver standard designed for high-performance AI and hyperscale data centers. Each OSFP module supports eight electrical lanes, with each lane capable of 100Gbps PAM4 signaling, delivering 800Gbps aggregate bandwidth. This makes OSFP ideal for AI server interconnects, where east-west traffic and low-latency communication are critical . The OSFP standard emphasizes thermal management, power dissipation (up to 15-20W), and future scalability, which are essential for dense AI clusters .

OSFP Variants and Thermal Architectures

There are two primary OSFP architectures relevant for AI servers:

- OSFP-IHS (Integrated Heat Sink): The heat sink is built into the module housing, providing efficient thermal dissipation directly through airflow in the server rack. This is ideal for high-density AI deployments where cooling efficiency is critical .
- OSFP-RHS (Riding Heat Sink): Requires a separate heat sink mounted on the module, offering flexibility for custom cooling solutions and higher thermal headroom. This variant is suitable for environments where airflow or rack design varies . Both variants share the same lane architecture, ensuring consistent electrical performan...
