

Mali delivery date 12-core fiber optic cable

Article Overview

Delivery dates for 12-core fiber optic cables to Mali depend on supplier stock, shipping method, and customs clearance, typically ranging from 2–6 weeks for standard orders.

Cable Type and Specifications

For outdoor and underground installations in Mali, the 12-core GYTY53 armored fiber optic cable is highly recommended. Key features include:

- Structure: Double-sheathed, steel-armored with a central steel strength member and gel-filled loose tubes for water resistance .
- Fiber Type: Single-mode (G.652D/G.657A1) or multimode options .
- Durability: Crush resistance ≥ 3000 N/10 cm, tensile strength ≥ 1500 N, operating temperature -40 °C to $+70$ °C, water-blocked per IEC standards .
- Applications: Suitable for long-distance telecom, FTTx, LAN, and utility backbone networks .

Procurement Considerations

- Supplier Selection: Suppliers like Alibaba and specialized fiber optic distributors provide 12-core cables with CE certification and compliance with ITU-T and IEC standards .
- Lead Time: Standard international shipping for armored fiber cables usually takes 2–6 weeks, depending on stock availability, shipping method (air vs. sea), and customs clearance in Mali.
- Installation Planning: For Mali, consider underground burial or duct deployment to protect against environmental damage. The GYTY53 cable is designed for direct burial and harsh outdoor conditions .

Local Context

Mali has ongoing fiber optic projects, including a 942 km national backbone linking Bamako to Gao, Kidal, and the Niger border, funded by international loans . This indicates that infrastructure exists to support the deployment of 12-core cables for telecom and FTTx networks.
