

# Methods to prevent landslides during cable tray installation

## Overview

Outdoor: Trays must be weather-resistant and equipped with waterproof measures, such as rain covers. Use appropriate cable ties or clamps to prevent damage caused by vibration or movement. Avoid direct long-term contact between cables and sharp metal edges; use insulation. Article Summary: A compliant cable tray installation requires a thorough understanding of NEC Article 392, proper structural support, and precise installation techniques. This method statement covers the site installation of the cable tray & ladders and the requirements of checks to be carried out. The Cable Tray system is installed in electrical rooms, plant rooms, and service. When offloading tray from a flat deck trailer using an overhead crane, care should be exercised in the placement and length of the slings to prevent crushing the product (siderails). Only. Tray, trunking and ladder will be stored in a covered area to prevent water or other foreign materials from staining or adhering Cable Tray, trunking and ladder will be protected from sunlight and moisture by covering them using tarpaulin.
