

New Zealand Fiber Optic Connector Setting Parameters

Article Overview

Fiber optic connections in New Zealand require proper ONT placement, VLAN/PPPoE configuration, and adherence to home wiring standards for optimal performance.

ONT Placement and Home Wiring

The Optical Network Terminal (ONT) is the hand-off point where your fiber network connects to your home devices. For best performance, place the ONT centrally in the home, near high-use areas such as the lounge or home office, to optimize WiFi coverage and reduce signal loss . Use Cat6 cabling in a star layout (home-run cables from a central point) to future-proof your network and support high-speed connections . Ensure at least two RJ45 jack points in each bedroom and main living areas, and avoid wet areas like bathrooms .

Fiber Connector and Conduit Requirements

Install Low Smoke Zero Halogen (LSZH) micro-ducts or 20mm PVC conduits for fiber cables, ensuring all bends are sweeping to protect the fiber integrity . Maintain proper clearances from power cables according to the NZ Telecommunications Forum Premises Wiring Code of Practice . The home distribution box should be accessible, typically at eye level, and provide power outlets for the ONT and backup devices .
