

No-Jumper Fusion Panel Optical Distribution Box

Article Overview

A No-Jumper Fusion Panel Optical Distribution Box is a compact, modular fiber management solution designed for fusion splicing and distribution without pre-installed jumpers, ideal for FTTH and FTTx networks.

Overview

A No-Jumper Fusion Panel Optical Distribution Box is engineered to manage, protect, and distribute fiber optic cables efficiently. Unlike pre-terminated panels, it does not include factory-installed jumpers, allowing network operators to customize fiber connections according to their deployment needs. These boxes are suitable for indoor and outdoor environments, supporting FTTH (Fiber to the Home), FTTx (Fiber to the Curb or Building), and other data communication networks .

Key Features

- **Fusion Splicing Capability:** Equipped with integrated splice trays to hold multiple fusion splices securely, typically accommodating 8 to 48 fibers depending on the model .
- **Modular Design:** Supports flexible configurations with SC, LC, or FC adapters, and can include space for optical splitters for PON (Passive Optical Network) systems .
- **Cable Management:** Includes guides and clamps to prevent excessive bending, maintain signal integrity, and secure incoming/outgoing cables .
- **Environmental Protection:** High-strength ABS or PC+ABS construction with IP65/IP...
