

Pakistan s national standard for fiber optic cable installation

Article Overview

Pakistan follows PTA-endorsed Outside Plant Code (OPC-2025) and ITU-T standards for fiber optic cable installation, covering both underground and aerial deployments.

Regulatory Framework

The Pakistan Telecommunication Authority (PTA) has developed the Outside Plant Code (OPC-2025), which serves as the national standard for fiber optic cable installation in new developments, including roads, footpaths, and railway tracks . This code aligns with international standards to ensure global compatibility, environmental protection, scalability, and safety compliance. It applies to all telecom operators, developers, and contractors, providing a unified framework for both outside plant (OSP) and in-building cabling .

Technical Standards

Fiber optic installations in Pakistan adhere to ITU-T recommendations, specifically:

- Single-mode fiber standards: G.652, G.655, G.657
- Testing parameters: G.650, G.651 These standards guide cable selection, splicing, testing, and validation procedures . Local regulations from PTA and municipal authorities take precedence over general guidelines, ensuring compliance with permits and right-of-way requirements
