

Peruvian manufacturer s hot aisle IP67

Article Overview

Peru has a growing market for hot aisle containment systems, but IP67-rated solutions are typically achieved through specialized enclosures rather than standard HAC products.

Hot Aisle Containment in Peru

The Peruvian market for hot aisle containment (HAC) systems is expanding rapidly, driven by digitalization, cloud adoption, and energy efficiency demands. Most activity is concentrated in Lima, particularly in industrial districts like Lurín and Callao, where colocation providers and enterprise data centers are upgrading or building new facilities . Local integrators and international manufacturers provide modular and customizable HAC solutions, often designed to optimize airflow, reduce energy consumption, and maintain stable operating temperatures .

IP67 Considerations

IP67 indicates an enclosure is dust-tight and protected against temporary immersion in water. Standard hot aisle containment systems are typically not IP67-rated, as they are designed for indoor data center environments where water exposure is minimal. However, if your application requires IP67 protection, you can achieve this by integrating IP67-rated boxes or panels into the containment system, particularly for sensitive electrical or control components .
