

Photovoltaic distribution box outlet

Article Overview

A photovoltaic distribution box outlet serves as a central point for connecting, protecting, and managing the DC output from solar panels before it reaches the inverter.

Function and Purpose

A photovoltaic (PV) distribution box, also called a DC combiner box, is used in solar PV systems to consolidate the output from multiple solar panel strings. It provides:

- Overcurrent protection via DC circuit breakers for each string or MPPT input.
- Surge protection to safeguard against lightning or voltage spikes.
- Safe disconnection points for maintenance or emergency shutdown.
- Wiring organization to simplify connections to the inverter .

The outlet of the distribution box is typically connected to the inverter using MC4 connectors or other compatible DC connectors, ensuring a secure and weatherproof connection .

Key Components

- DC Circuit Breakers – Protect each string or MPPT input from overcurrent. Common ratings include 25A to 250A depending on system size .
- Surge Protection Devices (SPD) – Type 2 SPDs are commonly used to prevent damage from transient overvoltages .
- Busbars and Terminal Blocks – Facilitate the combination of multiple string outputs into a single DC output....
