

Price of bridge beam support

Article Overview

Bridge beam support prices typically range from \$500 to over \$5,000 per beam, depending on material, size, and load capacity.

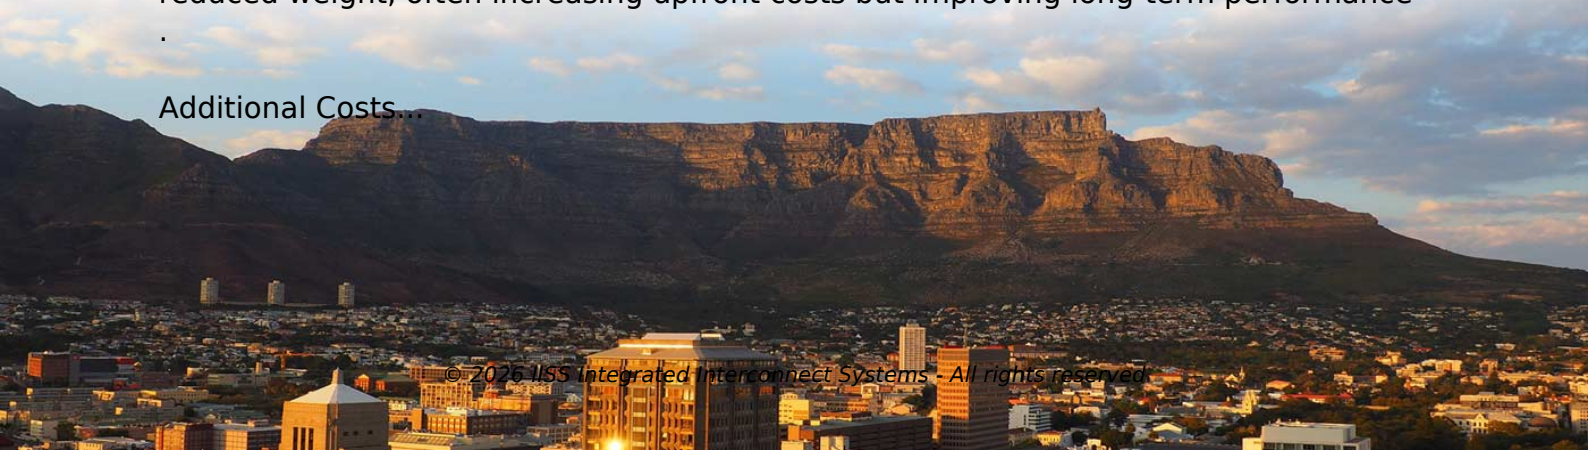

Cost Ranges

- Entry-Level Beams: \$500 to \$1,500 per beam, suitable for smaller projects or minimal load requirements .
- Mid-Range Beams: \$1,500 to \$5,000 per beam, ideal for standard bridge projects with moderate spans and loads .
- High-End Beams: Over \$5,000 per beam, often for custom designs or high-capacity beams required for large-scale infrastructure .

Material Considerations

- Steel Beams: Strong, durable, and fire-resistant; steel I-beams cost \$6 to \$18 per foot, while H-beams range from \$11 to \$80 per foot depending on span and load capacity .
- Concrete Beams: Precast or prestressed concrete beams are cost-effective for medium to long spans and are widely used in highway and municipal bridges .
- Composite Beams: May combine steel and concrete for optimized strength and reduced weight, often increasing upfront costs but improving long-term performance .
