

Price of full-span scaffolding for overpasses

Article Overview

Full-span scaffolding for overpasses typically involves specialized systems like clear span or movable scaffolding, with costs ranging widely depending on span length, load requirements, and project complexity.

Types of Scaffolding for Overpasses

1. Clear Span Scaffolding (ProScaf) This system is designed to create large unsupported spans over roads, voids, or obstacles, allowing construction without additional support beams. It provides a consistent working platform and can support pedestrian walkways, elevated decks, or suspended bridges. Costs are influenced by the span length, load capacity, and the number of components such as braces, transoms, and ledgers . 2. Movable Scaffolding System (NRS MSS) The NRS Movable Scaffolding System is widely used for span-by-span in-situ bridge construction. It is lightweight, easy to assemble, and adaptable to different cross-sections. The system includes collapsible inner formwork and rail-mounted outer formwork, allowing relocation to the next span. Advanced versions, like the Self-Launching MSS, reduce the need for cranes and external lifting equipment, which can lower labor costs .

Factors Affecting Cost

- Span Length and Height: Longer spans and higher overpasses require more materials and stronger components.
- Load Capacity: Scaffolding must support workers, equipment, and concrete formw...
