

Reserved opening for masonry distribution box

Article Overview

A reserved opening for a distribution box in masonry walls is created by planning the location, using prefabricated forms or masonry boxes, and ensuring proper alignment with electrical conduits and structural elements.

Planning the Reserved Opening

Before construction, determine the exact location and height of the distribution box based on room layout, accessibility, and local building codes . Consider the size of the box, the number of circuits, and future expansion needs . Mark the wall with a pencil or chalk to indicate the opening, ensuring it is level and properly oriented for wiring.

Prefabricated or Masonry Box Method

One effective method is to use a prefabricated member or masonry electrical box during wall construction . This involves:

- Placing a prefabricated form at the designated position before laying bricks or blocks.
- Building the masonry around the form to support it, ensuring the opening remains intact.
- Using reinforced lintels above the opening if required to maintain structural integrity.
- Ensuring the prefabricated form aligns with conduit entry points and allows for wir...
