

Setting up the last-level distribution box

Article Overview

A last-level distribution box should be installed in a dry, accessible location, properly grounded, wired according to standards, and equipped with appropriate protection devices for safe and reliable operation.

Location and Mounting

Choose a dry, well-ventilated, and easily accessible location for the distribution box. Avoid areas near water, heat sources, or places that are difficult to reach. For residential installations, the recommended height is typically 1–1.8 meters from the floor, with 1.3 meters suggested for elderly or handicapped users, while industrial settings may require adjustments based on equipment and space constraints (). Ensure sufficient clearance around the box for airflow and maintenance.

Box Selection

Select a box with the appropriate IP or NEMA rating to protect against dust, moisture, and physical damage. Materials are usually steel or durable plastic, and the box should accommodate the expected load and future expansion ().

Wiring and Connections

- Use a five-wire system for three-phase setups: three phase lines (A, B, C), one neutral, and one ground ().
- For 220V loads, connect one phase, one neutral, and one ground. For 380V three-phase loads, connect all three phases plus neutral and ground....
