

Single-phase distribution box configuration requirements

Article Overview

A single-phase distribution box safely distributes power from the main supply to multiple circuits using a main switch, RCCB, MCBs, neutral and earth bars.

Key Components

- Main MCB (Double Pole): Acts as the main switch, typically rated 63A for domestic installations, connecting the incoming phase and neutral wires from the utility supply .
- RCCB (Residual Current Circuit Breaker): Provides protection against leakage currents, electrical shocks, and insulation faults. Commonly rated 30mA for residential use .
- Single-Pole MCBs: Protect individual circuits or loads, such as lighting, sockets, or appliances. Double-pole MCBs may be used for special loads .
- Neutral Busbar: Distributes the neutral wire to all output circuits .
- Earth Busbar: Connects all protective earth wires from the supply and loads to ensure grounding .
- Enclosure: Houses all components, providing protection from dust, moisture, and accidental contact .

Wiring Sequence

- Incoming Supply: Connect the phase (Line) and neutral wires from the utility to the input terminals of the main MCB .
- Main MCB to RCCB: Connect the output of the main MCB to the input of the RCCB....
