

South Africa Cable Tray Type

Article Overview

The main types of cable trays used in South Africa are wire mesh (basket), perforated, ladder, return flange, and solid bottom trays, each suited for specific industrial, commercial, or data center applications.

Common Cable Tray Types

1. **Wire Mesh (Basket) Cable Trays** Wire mesh trays, also called basket trays, are widely used in server rooms, data centers, and exposed ceiling installations. They allow easy routing of cables, provide good ventilation, and are flexible for complex layouts . 2. **Perforated Cable Trays** Perforated trays have punched holes or slots along the base, offering a balance between cable protection and airflow. They are suitable for industrial environments, factories, and buildings with moderate heat-generating cables . 3. **Ladder Cable Trays** Ladder trays consist of two side rails connected by rungs, providing strong support for heavy cables. They are ideal for long cable runs in industrial plants, power stations, and commercial buildings where maximum strength and durability are required . 4. **Return Flange Cable Trays** Return flange trays are designed for exposed installations, such as showrooms or areas where aesthetics are important. The flanged edges provide additional protection and a neat appearance for visible cable runs . 5. **Solid Bottom Cable Trays** Solid bottom trays have a continuous base and sides, offering maximum protection for sensitive cables. They are used in environments where cables need full support and protection from dust, debris, or mechanical damage .
