

South African ONU Optical Network Unit QSFP

Article Overview

QSFP-compatible Optical Network Units (ONUs) in South Africa enable high-speed fiber connectivity for enterprise and last-mile deployments, supporting 40-100 Gbps links with scalable PON integration.

Overview of QSFP and ONU

QSFP (Quad Small Form-Factor Pluggable) modules are optical transceivers that convert electrical signals from switches, routers, or OLTs into optical signals for fiber networks. They support multiple lanes, enabling high aggregate bandwidth: QSFP (4×10 G) for 40 Gbps, QSFP28 (4×25 G) for 100 Gbps, and QSFP-DD (8×50 G) for 400 Gbps. QSFP modules use LC duplex or MPO/MTP connectors and are compatible with single-mode or multi-mode fiber, depending on the application. Optical Network Units (ONUs) are devices that terminate fiber connections at the customer premises or enterprise edge. They interface with OLTs in GPON, EPON, or XGS-PON networks, converting optical signals into Ethernet or other service interfaces. Pluggable ONUs, such as the Cambium XGS-PON models, allow flexible deployment in hard-to-reach locations and integrate with wireless radios for hybrid fiber-wireless solutions.

QSFP-Compatible ONU Applications

- Enterprise and Data Centers: Using QSFP28 CWDM4 transceivers, ONUs can support 100 Gbps links over single-mode fiber up to 2 km, ideal for high-bandwidth applications and scalable network upgrades ...
