

Starting elevation of cable tray

Article Overview

The starting elevation of a cable tray is the initial vertical reference point from which the tray is installed, defined relative to the top, bottom, or center of the tray.

Definition and Reference Points

The starting elevation specifies the vertical position where a cable tray begins its run. This elevation is set according to the vertical alignment chosen for the installation, which can reference:

- Center of Cable Tray: Elevation refers to the tray's centerline; the tray extends above and below this point.
- Top of Cable Tray: Elevation refers to the top edge; the tray extends downward from this point.
- Bottom of Cable Tray: Elevation refers to the bottom edge; the tray extends upward from this point.
- Bottom of Hanger: Elevation refers to the bottom of the supporting hanger; the tray and hanger extend above this point . Choosing the correct reference ensures proper alignment with other trays, equipment, or structural elements.

Installation Considerations

- **Alignment with Slopes:** When installing on sloping ceilings or framing, the starting elevation may need adjustment to maintain a consistent slope along the tray run. Software tools like Revit allow editing the start or end elevation to match the slope.
- **Support and Safety:** Cable trays must be supported according to standards (e.g.,...
