

Switch with optical port and optical cable splicing

Article Overview

To connect a switch with optical ports, use compatible optical cables and perform proper fusion splicing of hybrid copper-fiber cables to ensure reliable optical and electrical connectivity.

Understanding the Components

Switches with optical ports often support SFP, Mini-GBIC, or hybrid optical-electrical ports. These ports allow direct connection to optical fibers for high-speed data transmission . Hybrid copper-fiber cables integrate both optical fibers and copper wires, enabling simultaneous data and power delivery to devices like access points or other switches . Hybrid cables consist of:

- Main cable: Long-distance cabling without connectors.
- Pigtail cords: Short cables with optical-electric hybrid connectors for connecting to switches or powered devices.
- Jumpers: Optional patch cords for neat cabling in equipment rooms .

Optical Cable Splicing Procedure

- Preparation: Gather tools such as a fusion splicer, fiber cleaver, stripping pliers, alcohol swabs, heat shrinkable tubes, and protective sleeves .
- Routing: Route the hybrid cable pigtail through the switch or terminal box port before splicing .
- Fusion Splicing:...
