

The alarm for the front shelf cannot be cleared

Overview

Restarting the SpectroSERVER has no effect. The fault isolation alarm is not user clearable, so this cannot be cleared manually. For the purposes of this documentation set, bias-free is defined as language that does not imply discrimination based on age, disability, gender, racial identity, ethnic identity, sexual orientation, socioeconomic status, and. The alarm status table displays the current state of the alarms available to the gateway (including those provided by Remote Tag Providers). It can be configured to show active, unacknowledged, cleared, and acknowledged alarms. I have dug through some the docs but have not been able to find a solid answer on some. The Shelf Alarm Panel is a FRU and provides: The SAP is connected to the Schroff ACB-IV Shelf Manager by a I2C connection, the signals from the serial connectors are routed directly to serial console interface on the Shelf Manager. The LM75 temperature sensor measuring the board temperature is. A68 Delete Cleared Alarms from Display —Complete this procedure as needed to delete cleared alarm information. A70 View Alarm Counts on the LCD for a. A fault isolation alarm is raised on the fault isolation model, caused by a deleted model, which is not clearing: "Critical","Nov 2, 2017 3:14:53 AM EDT","Fault Isolation","", "", "FaultIsolation", "Yes", "UNRESOLVED FAULT DETECTED", "xxxxx (0xx00000)", "FaultIsolation" Restarting the SpectroSERVER has.
