

The red light at the router s fiber optic connection remains on

Article Overview

A red light at your router's fiber optic connection usually indicates a Loss of Signal (LOS), meaning the router is not receiving a proper optical signal from your ISP.

Common Causes

- Physical fiber issues: The fiber optic cable may be loose, bent, cut, or the connector may be dirty, preventing proper signal transmission .
- ISP outage: Maintenance, technical issues, or local service interruptions can cause the LOS light to turn red .
- Router or ONT malfunction: Firmware errors, hardware faults, or power fluctuations can prevent the device from detecting the fiber signal .
- Incorrect connections: Loose or improperly connected cables between the ONT and router can trigger the red light .

Troubleshooting Steps

- Check for ISP outages: Visit your ISP's website or social media pages to see if there is a known service disruption .
- Inspect the fiber cable: Ensure the cable is securely connected, free of bends or damage, and the SC/APC connector is clean .
- Restart the router/ONT: Power off the device, unplug it for 30 seconds, then reconnect and turn it back on. This often resolves temporary signal issues .
- Verify all connections: Check power, LAN, and fiber cables to ensure they are firmly attached and undamaged
