

# Thickness of cable trays in the Philippines

## Article Overview

Cable tray thickness in the Philippines varies by material, type, and load requirements, typically ranging from 1.2 mm to 3.0 mm for metal trays, in accordance with PEC 2017 and industry standards.

### Standard Thickness Guidelines

Cable trays in the Philippines are generally manufactured from steel, aluminum, or non-metallic materials like PVC. The thickness depends on the tray type and the expected load:

- Ladder-type trays: Commonly used for heavy-duty power cables; steel trays typically have a thickness of 1.6 mm to 3.0 mm, while aluminum trays may range from 1.2 mm to 2.5 mm .
- Perforated or ventilated trays: Designed for medium loads and better airflow; steel thickness usually ranges from 1.2 mm to 2.0 mm .
- Wire mesh trays: Used for light-duty or data cables; thickness is generally 1.0 mm to 1.5 mm .
- PVC trays: Non-metallic trays for corrosion resistance; thickness typically ranges from 2.0 mm to 3.0 mm, depending on size and load .
