

Tools for laying fiber optic cables on different floors

Article Overview

Installing fiber optic cables across multiple floors requires specialized tools for cable preparation, pulling, splicing, termination, testing, and safety to ensure reliable, low-loss connections.

Cable Preparation and Pulling Tools

For multi-floor installations, proper cable handling is critical. Essential tools include:

- Fiber optic strippers to remove the outer jacket without damaging the delicate fiber inside .
- Cable cutters and scissors designed for clean cuts of fiber and jackets .
- Pulling grips and fish tapes to guide cables through conduits, risers, or vertical shafts safely .
- Cable lubricants to reduce friction when pulling long runs between floors.

Splicing and Termination Tools

High-precision splicing and termination are crucial for maintaining signal quality:

- Fusion splicers for permanent, low-loss connections between fibers, often with core alignment for high-density cables .
- Mechanical splices for temporary or quick connections.
- Cleavers to ensure perfectly flat fiber end faces before splicing, critical for minimi...
