

Tools for laying optical fiber cables

Article Overview

Laying optical fiber cables requires specialized tools for preparation, splicing, testing, and cleaning to ensure high-quality, low-loss connections.

Core Installation Tools

- Cable Strippers and Jacket Cutters: Remove outer jackets and aramid yarn without damaging the fiber inside, essential for preparing cables for termination or splicing .
- Precision Cleavers: Produce a clean, flat fiber end face with less than 1° angle, critical for fusion splicing .
- Heavy-Duty Shears: Cut fiber cable jackets and aramid yarn efficiently .
- Three-Hole Strippers: Remove coating layers from fibers (250µm → 125µm) for splicing .

Splicing and Termination Tools

- Fusion Splicers: Align and fuse fiber ends using an electric arc for low-loss, high-strength connections. Core-alignment splicers offer higher precision than cladding-alignment models .
- Mechanical Splice Kits: Alternative to fusion splicing for temporary or low-capacity connections .
- Heat-Shrink Protection Sleeves: Protect fusion splices and maintain mechanical integrity .
