

# Use of optical fiber O-rings

## Overview

Fibre optic slip rings are used in robotics and automation to transmit power and data between two or more nodes. Also known as fiber optic rotary joints, fiber optic rotary connectors, or optical hinges, optical fiber slip rings. Hybrid fibre optic slip rings for transmitting analogue or digital optical signals with data rates of up to 10 GBit. Single-mode or multi-mode fibres for single or multi-channel transmission. Working voltage: 440VAC/DC Configure. A Fiber Optic Rotary Joint (FORJ) is a device that allows an optical signal to be transmitted across the interface between a continuously rotating platform and its stationary support structure. • Could support 1,2,4,6,8,10,12,16,24 channel fiber optic on 360 rotating. • Combine with 1~200 circuits Power/Signal.
