

Waterproof cold aisle type for Australian data centers

Article Overview

Waterproof cold aisle containment in Australian data centers can be achieved using modular systems with polycarbonate panels or high-grade vinyl curtains, offering efficient airflow management and protection against moisture.

Cold Aisle Containment Overview

Cold aisle containment (CAC) involves enclosing the cold air supply corridor in a data center to prevent mixing with hot exhaust air, ensuring consistent inlet temperatures for servers and improving cooling efficiency . This is particularly important in high-density Australian data centers where energy efficiency and equipment reliability are critical. CAC can be implemented in new builds or retrofits, using modular panels, doors, and roof systems to create a controlled airflow path .

Waterproof and Moisture-Resistant Options

For environments where water exposure or high humidity is a concern, the following materials and designs are recommended:

- **Polycarbonate Panels:** Twinwall or multiwall polycarbonate sheets are thermally efficient, fire-resistant, and waterproof, making them ideal for cold aisle containment . They provide rigid, durable barriers that prevent air leakage and resist moisture ingress.
- **High-Grade Vinyl Curtains:** Products like Polarplex containment curtains are made...
