

What configurations are needed for Huawei access switches

Overview

Replace USERNAME with the new username, set the password, define service-type (telnet, ssh, etc.), and specify the access level (1-15). Use the following AAA commands to create a new user. Log in. When configuring access switches to be managed by the controller, you can use the core switch as the management subnet gateway of the access switches, and configure the management VLAN auto-negotiation function with the core switch acting as the root device. In this way, the access switches can go. Before You Start This document will help you log in to and quickly configure Huawei S series switches. For more service configurations, see the Switch Configuration Guide. You can run the display version command in the user view to check. Configuring a Huawei switch isn't just about plugging in cables and ticking boxes—it's about building a network that's resilient, efficient, and ready to grow.
