

What does it mean when the router's fiber optic connection is showing red

Article Overview

A red light on your router's fiber optic connection indicates a loss of signal, meaning the router cannot communicate properly with your Internet Service Provider (ISP).

What a Red Light Signifies

When the LOS (Loss of Signal) or PON (Passive Optical Network) indicator on a fiber router shows red, it typically means there is a critical connectivity issue. This can occur due to:

- Physical fiber damage: Cuts, bends, or broken patch cords in the fiber optic cable can disrupt the signal .
- Loose or dirty connections: Improperly connected or dirty connectors can prevent proper communication .
- Service outage: ISP maintenance, technical issues, or local outages can cause the red light to appear .
- Router or ONT malfunction: Hardware or firmware issues in the router or Optical Network Terminal may trigger the red light .
- Power issues: Fluctuations or interruptions in power supply can affect the router's operation .

Troubleshooting Steps

- Check for ISP outages: Visit your ISP's website or social media pages to see if there is a known service disruption
