

What is an 8-core indoor single-mode optical cable

Article Overview

An 8-core indoor single-mode optical cable is designed for high-speed, long-distance indoor data transmission, featuring eight individual single-mode fibers with LSZH jackets for safety and durability.

Key Specifications

- Fiber Type: Single-mode (SM), 9/125 μm core/cladding diameter, optimized for long-distance, high-bandwidth transmission .
- Core Count: 8 individual fibers, each color-coded for easy identification .
- Buffering: Tight-buffered fibers with a 0.9 mm coating for protection and flexibility .
- Jacket Material: LSZH (Low Smoke Zero Halogen), flame-retardant and emits minimal smoke or toxic gases in case of fire .
- Cable Diameter: Typically around 5.3 mm outer diameter with reinforced layers including aramid yarn for tensile strength .
- Weight: Approximately 20 kg/km .

Construction Features

- High-Purity Silica Core: Ensures low attenuation and high signal quality .
- Protective Coating: UV-curable acrylate applied over the fiber cladding for durability .
- Reinforcement: Multi-strand aramid yarn provides tensile strength and prevents fiber damage during installation
