

Where is the blue light from the fiber optic router

Article Overview

The blue light on a fiber optic router typically indicates that the router is powered on and either successfully connected or actively transmitting data.

Meaning of the Blue Light

On most modern fiber routers, a solid blue light usually signifies that the router is powered on and functioning properly, with a stable connection to the internet or the Optical Network Terminal (ONT) . A blinking or flashing blue light often indicates that the router is booting up, syncing with the network, or actively transmitting data between your devices and the internet . During initial setup, the light may blink for several minutes until the connection is fully established .

Location of the Blue Light

The blue LED is typically located on the front panel of the router, often alongside other status lights such as Power, LAN, WLAN/Wi-Fi, and WAN indicators . On some models, the blue light may appear as a ring around a button (like the WPS button) or as a small dot labeled for internet or network status .

Connection to the ONT

The blue light is closely tied to the fiber connection from the ONT, which is the device that converts the optical signal from your ISP into an electrical signal for your router...
