

Where is the fiber optic cable box installed

Article Overview

The fiber optic cable box, often called the Optical Network Terminal (ONT), is typically installed on an exterior wall of your home or inside near an electrical outlet, with the fiber cable running from a nearby street or utility box.

External Fiber Box

The fiber optic cable originates from a nearby terminal, which may be a pole or an underground box, often referred to as a fiber distribution point or flower pod. These boxes house the necessary components that interface with the optical fiber cables and split the signal for multiple homes, making them essential for connecting your property to the broader fiber network . The fiber drop cable runs from this external box to your home, either through underground ducts, overhead lines, or trenching, depending on your property's layout .

Optical Network Terminal (ONT)

Once the fiber reaches your home, it is connected to the ONT, which converts the light signals from the fiber into electrical signals usable by your router and devices . The ONT can be installed:

- Outside the home in a weatherproof enclosure, often near the external fiber box.
- Inside the home on a wall near an electrical outlet, typically in a utility room, basement, or near your router . The technician will consider accessibility, signal stre...
