

Which type of cable tray should be chosen for outdoor cables

Article Overview

For most general outdoor applications, a Hot-Dip Galvanized Steel ladder-type cable tray offers the best balance of strength, corrosion resistance, and cost, while 316 Stainless Steel or Fiberglass are preferred for highly corrosive environments.

Key Considerations

Environmental Exposure: Assess the climate and potential corrosives. Coastal or marine areas with salt spray, industrial zones with chemical fumes, or regions with high humidity and acidic rain require materials with superior corrosion resistance. Hot-Dip Galvanized (HDG) steel is suitable for general outdoor use, 316 Stainless Steel excels in harsh marine or chemical environments, and Fiberglass Reinforced Plastic (FRP) is inert to many chemicals and non-conductive . **Load Capacity:** Determine the weight of cables and any additional loads. Outdoor trays may need to support heavy power cables, maintenance personnel, or equipment. Ladder trays provide excellent mechanical strength and long-span support, making them ideal for heavy-duty applications . **Tray Type:**

- Ladder Trays: Best for heavy power cables and long runs; allow airflow for heat dissipation.
- Perforated Trays: Offer continuous support for mixed cable types with moderate ventilation; suitable for control, instrumentation, and communication cables.
- Solid-Bottom Trays: Provide maximum protection against contaminants; ideal for sensitive or outdoor cables in corrosive environments....
