

Wiring method for connecting PS to the distribution box

Article Overview

Connect the PS to the distribution box using the designated connectors, ensuring correct phase, neutral, and earth wiring, proper cable management, and adherence to safety standards.

Step-by-Step Wiring Procedure

1. Identify Connectors and Cables

- For systems like the Schneider Electric PacDrive PS-5 and DB-5, use the prefabricated connecting cable provided for PS-5/DB-5 connections.
 - Connectors X1 and X2 are typically used for power input, while X3, X6, and X8 may be used for internal connections between the PS and DB .
- #### 2. Connect Power Supply to Distribution Box
- Remove any protective covers or dummy plugs from the DB connector.
 - Insert the PS/DB connecting cable into the X1 connector of the DB.
 - If multiple DBs are used, connect the next DB using the X2 connector and link it to the previous DB via the prefabricated DB-5/DB-5 cable .
- #### 3. Phase, Neutral, and Earth Wiring
- Connect the phase (L) and neutral (N) wires from the PS to the input terminals of the main breaker in the distribution box.
 - Connect the earth (PE) wire to the earth bus or link in the DB. Ensure the earth wire is continuous and properly grounded .
- #### 4. Branch Circuit Connections
- From the main breaker, connect the output to the RCCB (Residual Current Circuit...
